

Illuminated Wall Clock

See the time, day or night

A built-in sensor detects falling levels of light and automatically illuminates the LED's so that you can continue to see the time easily, even in total darkness. That

makes it ideal for a bedroom, where you can keep track of the time without disturbing others - unlike conventional luminous dials, it doesn't fade through the night. Measuring 25cm in diameter and 5.5cm deep, the clock is powered by 2 x D batteries for the sensor and LEDs and 1 x AA battery for the actual clock movement (the batteries are not supplied). Order yours now and see the time 24 hours a day.

Lights up
during darkness
for easy
visibility
